CASE STUDY 29

PASSWORD POLICY VALIDATION ENGINE

Python Program

```
print("===== PASSWORD POLICY VALIDATION ENGINE =====")

password = input("Enter your password: ")

errors = []

if len(password) < 8:
    errors.append("Password must contain at least 8 characters.")

if not any(char.isupper() for char in password):
    errors.append("Password must contain at least one uppercase letter.")

if not any(char.islower() for char in password):
    errors.append("Password must contain at least one lowercase letter.")

if not any(char.isdigit() for char in password):
    errors.append("Password must contain at least one digit.")

special_characters = "!@#$%^&*()-_+=?"

if not any(char in special_characters for char in password):
    errors.append("Password must contain at least one special character.")
```

```
print("\n===== VALIDATION RESULT =====")

if len(errors) == 0:
    print("Password is valid.")
    print("All password requirements are satisfied.")
else:
    print("Password is invalid.")

    for error in errors:
        print("-", error)

print("\nValidation completed.")
```

Output:
